Mirpur, Dhaka, Bangladesh +8801711324720 Portfolio

ABOUT ME

- ➔ Software Engineer with 5+ years of experience shipping web and cross-platform mobile products, entirely in remote roles with teams in the USA, Australia and Germany.
- ➔ Angular and NestJS specialist focused on backend architecture: NestJS services, event-driven pipelines (Amazon SQS, BullMQ), PostgreSQL and MongoDB, and AI-powered features.
- ➔ Practice AI-driven development for speed, reviewing every generated line; everything I ship is tested, performant and efficiently architected.

EDUCATION

- ➔ Independent University, Bangladesh | *January 2019 - April 2024* | **B.Sc. in Computer Science**
- ➔ Edexcel Board, British Council Bangladesh | *May 2015 - May 2018* | **O & A Levels**

TECHNICAL SKILLS

Languages	TypeScript (Expert), JavaScript ES6+ (Expert), Python, C#, Go
Backend	NestJS (Expert), Node.js (Expert), event-driven architecture with Amazon SQS and BullMQ, REST & GraphQL (Apollo Server), .NET Core (CQRS/MediatR)
Frontend	Angular v2–22 (Expert) with Signals & RxJS, NgRx, React/Next.js
Mobile	Ionic (Angular) (Expert), Capacitor
Styling	TailwindCSS (Expert), SASS/CSS, Bootstrap
Data	PostgreSQL, MongoDB, MySQL, Redis, Azure Cosmos DB, Prisma, Mongoose, EF Core
Cloud & DevOps	AWS (SQS, S3), Docker, CI/CD (GitHub Actions, Azure DevOps), Netlify, Vercel, Turborepo monorepos
Testing	Vitest, Jest, Playwright (E2E)
AI	LLM integration via OpenAI and OpenRouter APIs, function calling / tool use, multi-agent orchestration built from scratch without frameworks, model selection across frontier and open models; AI-driven development with Claude Code; hands-on with autonomous agents (Hermes) for everyday workflows
Integrations	Slack API, HubSpot, WorkOS, Auth0, PostHog, Socket.io

PROFESSIONAL EXPERIENCE

Software Engineer | **BizScout** | *July 2025 - present* | Austin, TX (Remote)

- Sole engineer for all Contrarian Thinking Academy features on DealOS, BizScout's business-acquisition platform (170K+ users): work directly with Academy leaders to define, design and ship features used by 5,000+ people daily and 20,000+ monthly.
- Own the backend architecture: NestJS in a Turborepo monorepo on PostgreSQL (Prisma) and MongoDB; migrated event-driven workloads from BullMQ to Amazon SQS. React/Next.js on the frontend.
- Own the financial calculators, Deal Cockpit, Acquisition Partners, AI deal-review pipeline and admin panel; shipped an LLM-powered natural-language search with from-scratch multi-agent orchestration.

Full Stack Developer | **Allgeier Inovar** | *September 2023 - April 2025* | Germany, Remote

- Collaborated with international development teams to develop new features and resolve legacy bugs for complex archiving software utilized by enterprise clients including Vodafone and Mercedes Germany.
- Refactored the codebase to a smart/dumb component architecture, improving reusability and reducing maintenance overhead.
- Improved application performance with infinite-scroll pagination, Angular Portals and RxJS optimizations, cutting load and interaction times.

Full Stack Developer | **Cuebites** | *January 2023 - June 2023* | Australia, Remote

- Developed enterprise-level human resource management applications using Angular and NgRx for frontend, .NET Core with MediatR CQRS pattern for backend, and implemented CI/CD pipelines with Docker and Azure DevOps.
- Maintained inventory management software built with Angular (Fuse template) and Syncfusion component library, supporting 3 backend microservices architecture with .NET Core CQRS pattern.

Angular Developer | **Resultier Inc** | *April 2022 - December 2022* | USA, Remote

- Collaborated with a cross-functional international team of 50+ developers, designers, managers, and clients to deliver complex USA HealthcareTech and InsurTech applications using Angular.
- Executed major technical upgrade from Angular 4 to Angular 13, and implemented complex reactive forms handling 100+ dynamic inputs for USA healthcare HCFA forms.

PERSONAL PROJECTS

Quick Grocery List | Ionic 8, Angular 22 (Signals), Capacitor 8, TailwindCSS 4

- Mobile app for rapid list building: drag reordering, check/uncheck, virtual-scroll rendering and keyboard-aware editing; offline-first with Ionic Storage. Actively maintained (v2.1).
  Source code

Remote PC Monitor | Go, Upstash Redis, SvelteKit 5, TypeScript, TailwindCSS, PWA

- Monitor a PC's CPU/GPU temperatures and power draw from any device: a Go service samples LibreHardwareMonitor and publishes to Upstash Redis; an installable SvelteKit PWA renders configurable metric cards with adaptive refresh and offline support.
- Tuned for free tiers: ~150-byte payloads (97% smaller) and 98% fewer updates when idle.
  Live · Source code

Portfolio Site | Angular 22, standalone + zoneless, SSR prerender, TailwindCSS, Lottie

- Prerendered at build, hydrated incrementally (@defer on viewport/idle); every animation capped at 30 updates/s with a shared frame clock, Lotties prefetched a screen ahead.
- Lighthouse 92 desktop / 99 mobile, ~0.6 MB cold load, idle CPU cut from ~25% to under 10%.
  Live · Source code

Inventory Management System | Angular 16, PrimeNG, TailwindCSS, NestJS, Prisma, Supabase (PostgreSQL)

- Multi-tenant inventory system: multiple business profiles with role-based access, relational model with bidirectional stock tracking for imports/exports and manufacturing, full CRUD for inventory, products, purchases and expenses.
  Live · Frontend source · Backend source
